

Thermoshield – Environmental Policy

Thermoshield, a manufacturer of liquid insulating products is committed to the continual improvement of its environmental performance through the implementation and certification of the integrated quality and environmental management system compliant to ISO 14001:2015.

Through the implementation of the EMS, Thermoshield has committed to a comprehensive management program of their environmental aspects and impacts, to continually improve performance. The EMS also provides the mechanisms through which environmental commitments have been made enabling them to constantly monitor and evaluate definitively their performance and any other applicable requirements.

Thermoshield is committed to complying with all relevant environmental legislation, the prevention of pollution and ultimately helping clients reduce their own carbon footprint.

Thermoshield's Environmental Product Declaration compliant to ISO 14025 defines the environmental impacts it has on the environment through emissions, natural resource use and waste generation, and the indirect impacts that occur through to the final disposal of the product.
